

ORGANIC COTTON

Eco-friendly organic cotton is grown to meet stringent standards. When woven, textiles have the feel of linen while maintaining its characteristic smoothness and flattering soft drape.

ECO-FRIENDLY- far safer for the environment and people; no pesticides, insecticides, herbicides or chemicals used

IMPROVES & ENRICHES- helps build back biologically diverse agricultural systems, replenishes soil fertility and promotes cleaner air and water

SOFT- fibers are softer because there are no chemicals or irritants to break up and roughen the fiber's structure

SAFER & HEALTHIER- extremely breathable and soft unlike synthetics that pill, emit static electricity, prematurely age and trap perspiration

COMFORT
